In case, you need help:	

# How to use SafeSeaNet (SSN)

Homepage: nsw.safeseanet.dk

User name:

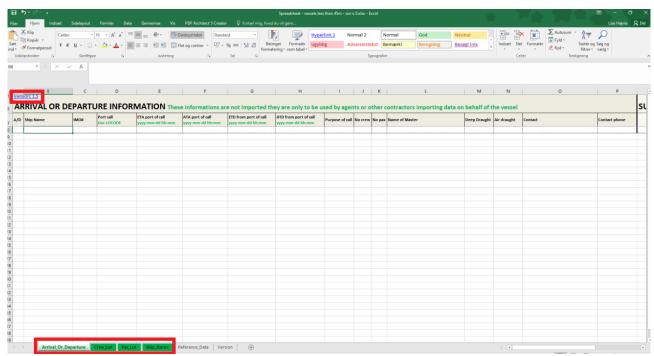

Password:

If you've been inactive at SSN for more than 15 minutes, you must log out and in again, otherwise the system don't remember what you were doing.

Create an arrival AT LEAST 24 hours, before the expected arrival at harbor.

What do I need to fill in SSN correctly?

Excel spreadsheet. Fill in the green tabs.

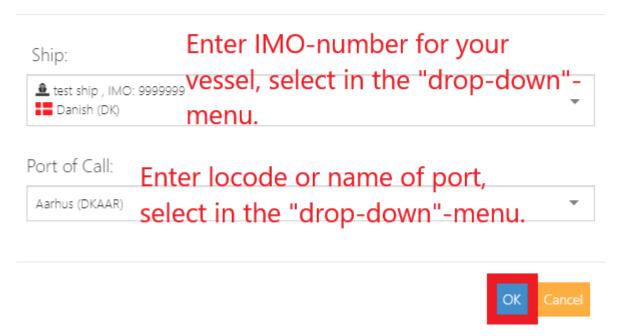

## Create a "new arrival notification"

Select your vessel. Do this by typing the vessel's IMO-number. If your vessel doesn't have an IMO-number, use MMSI or the name of the vessel. Please be aware, the system must "think" a bit before the vessels's name appears via "drop down" then select it here. If you are not patient, it will fail. Do NOT click on "add".

Then enter the port the ship is going to call. Again use "drop down".

# New Arrival Notification

NOTE: When you start up your reporting, and find your vessel has the wrong name at the correct IMO-number, just go ahead and use the correct IMO. When you have created your report, please update your vessels data at "ship identification". Please have a look in the in the back of this manual, for further instruction.

The following picture will apear:

Crganisation: Ih-havn-demo		F7	IIII FLORA PIONEER (IMC: 9344085) Port of Call: Kobenhavn (DKCPH)					ast edited by: Lise-Demo2 (SSNTEST)	
***	Ship identificat	tion	Ship particular	5					Notice the red
** <sub>A</sub>	Name	FLORA PIONEER	Flag state *	Cayman Islands (KY)	*	Gross tonnage			"warning signs'
*	Call sign	ZCTT6	Certificate of registry:			Net tonnage			on the left side
쓭	MMSI Number	319636000	Port		*	Ship type		*	on the left side
ŵ <sub>A</sub>	Description		Date		CEST 🔳	Company			
<b>⊘</b> _	Inmarsat call number		Number						
<b>&amp;</b> ≜									

When there is a red warning sign, it tells you, some information are missing on the tab, and you cannot submit the information. When there is red warning signs, you are not able to hand in/submit your report, but you are able to save information. To save, use the "floppy-disk" icon in the upper right corner.

Notice that it is a "draft"; it means that it hasn't been sent off, and you can still edit/change/add. Here is also the "reference number". If we are to help, you solve a problem of a specific arrival/departure you have to inform it to us.

At the top at the right corner, you find 5 icons.

If you choose	you get the option to upload the excel document where you have your data.
If you choose	× you delete what you have created.
If you choose	you save what you have already created. This is a good idea to do on a regular basis.
If you choose	you are printing.
If you choose when all red	you submit to SSN. This can't be done before the icon is highlighted and it happens warning signs have disappeared.

### Upload of data from Excel spreadsheet v. 1.5

The next thing you need to do is fill in your "draft". Now import the data you have in your excel spreadsheet. Then this picture appears:

#### You should be aware of the following:

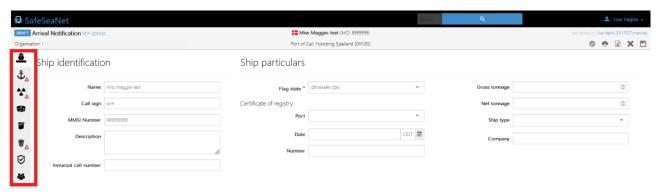

- 1. For all the tabs you want to transfer there must be a checkbox. In this case, pay particular attention if you collect information from multiple spreadsheets for the same arrival. Then you ONLY set the check mark from that you want to transfer. If you have the fly in all, it will overwrite what you've already made. If all your information is in the same spreadsheet, under different tabs, it is important that there is a checkmark in ALL.
- 2. In "numbers of records", you are told how many data lines you have in each tab. For example, if not facing a number, it means that it doesn't transfer any data. Even if you have entered data. This is often due to missing/incorrect completion of the excel sheet.

Then choose "next", do this for all the tabs that appears, telling which information you are putting into SSN.

#### Fill out the rest:

Once you have entered all the data, there will still be red warning signs: It's OK.

Enter each tab and make the last fillings manual.

#### "Ship Identification":

If your IMO-number has incorrect information in name, mmsi ect. You can correct it here. Remember to save your corrections at the "floppy-disc", because the system doesn't save automatically.

#### "Voyage":

You have to manually fill in the details, where a red start marks it.

#### "Dangerous and Polluting Goods" (DPG):

You must decide if there is anything on board, or if you are obliged to report.

Only fill out data in the red box if the vessel shall declare dangerous and polluting goods. Remember to fill out the data marked with a red stars.

If the vessel doesn't transport, or is not obliged to report DPG at arrival, set a checkmark at the top left, where you confirm that the ship doesn't have to report.

#### "Waste":

You must decide if you have to declare any waste.

If you can confirm one of the below statements, you tick the box, and you don't have to report any waste details:

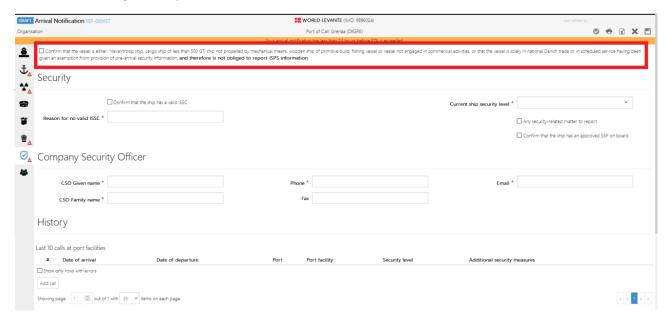

- 1. a ship with a gross tonnage less than 300 (< 300 GT).
- 2. a fishing vessel, traditional ship or recreational craft with a length of less than 45 meters.
- 3. a vessel holding an exemption issued to the specific Port of call by the Danish Environmental protection agency.

If you can't confirm one of the three statements, you have to fill out waste details. You have to inform what kind of garbage you have on board of the vessel. All vessels carries some kind of garbage, for instance household waste.

#### "Security":

You set a mark in the red box if your vessel is NOT obliged to report ISPS.

For all vessels obliged to report, fill out the information in the fields marked with a red star.

#### "Crew & Passenger Information":

Use the Excel Spreadsheet to fil out the crew and passenger information, it's the most easy way to do it, and this way you are able to reuse information to the next portcall.

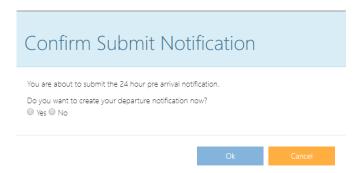

Crew & Passeng	ers Information							
Number of per	sons on board *		Number of passenger	s *		Number of crew *	Confirm that the ship has	no stowaways on
Crew								
	Given name Gender		tionality Date of birth		ID document	ID number Visa/residence	permit number Crew eff	ects

Once you have fill out the missing information, the warning sign disappears.

#### Submit:

Then you are ready to "Submit:, our you say OK to send your "24 hours pre arrival" to SSN:

When you "submit" your "draft", the system asks if you want to create your "departure" right away.

You may choose to say NO at this point, when you go from "draft" to 24 hor prearrival". The system will <u>automatic</u> create a departure when your "Submit" your arrival to "completed".

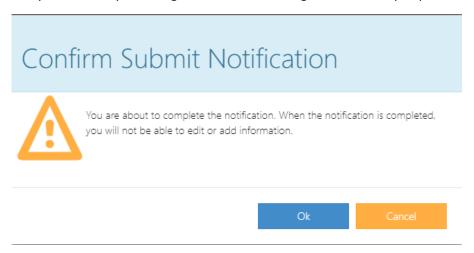

On your "dashboard" your "24 hour prearrival" will look like this.

#### When the ship has berthed:

ATA must be completed, no later than one hour after arriving at port, this is seen as the last "signature" that everything is now OK. To enter the arrival time, you click at "24 hour prearrival", enter the correct time and you submit by selecting: 

You will now get this: where you press OK.

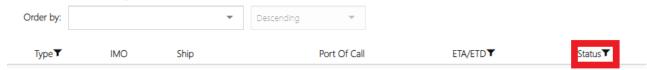

Then your arrival DISAPPEARs from your "dashboard", this is OK. That is because it is now completed and you can't make any more changes.

If you didn't say yes to create your departure earlier, this will now happen automatic.

#### How to find "Completed" reports:

You can seek out your completed arrivals by selecting the "funnel" in the status:

# Arrival and Departure Notifications

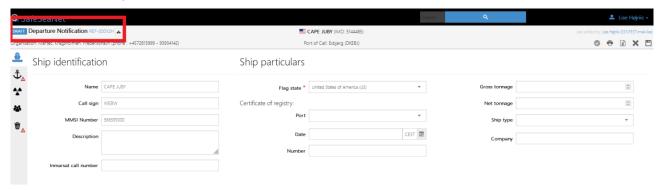

Then you can remove all those you don't need and only select "completed" and you can see all your completed passes sent to SSN.

### Create a departure:

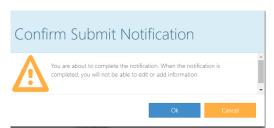

Your departure will have a different reference number compared to your arrival. Please remember to inform the new, if you need assistance.

If you have new crewmembers on board, compared to your arrival, you can use the Excel spreadsheet to upload the new crew. This will automatically overwrite information from your arrival.

Like you did on arrival, store and choose, and you submit your departure "confirm submit notification". Your departure is now on your dashboard as "predeparture".

No later than one hour after you depart the port, you have to fill in the departure time. (ATD). Save and submit and you have completed your departure. By doing this you sign off you report to the authorities. You get this screenshot:

Again, as on your arrival, your "predeparture" disappears from your dashboard. This is OK, because you can use the funnel below the "status" and view your data under "completed".

#### Transfer of data between arrival and departure:

Data between arrival and departure is only transferred one time. It's when the departure is created. This means that if you create your departure when your arrival changes status from "draft" to "24 hour prearrival", data you fill in at your arrival when the status is "24 hour pre-arrival" will not be transferred to your departure.

There is no right or wrong time to create the departure, it all depends on what makes most sense in your work-process.

## Wrong data connected you vessels IMO-number:

When you start up your reporting, and find your vessel has the wrong name at the correct IMO-number, just go ahead and use the correct IMO. When you have created your report, please update your vessels data at "ship identification". After that, write an email to <a href="mailto:safeseanet.dk">safeseanet.dk</a> and inform us.

If you create a SafeSeaNet report using the wrong IMO-number and/or wrong port you have to delete your report and start over using the correct information.

Remember to pass on this information to new personal and students; this can save you a lot of time.

#### Possible errors:

You may experience getting a message when you submit your "24 hour prearrival."". It tells you that there are problems with the information you have entered. If you read the lines, they tell you where the error is, so you don't have to look all over your report again. But it's not easy reading.

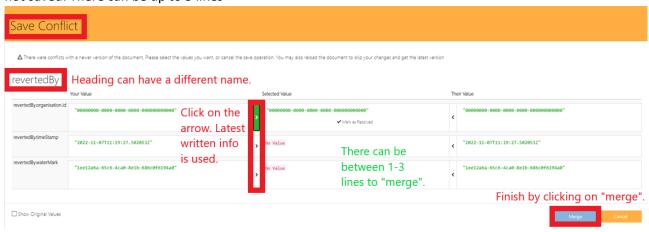

#### Other things that may cause problems:

- It is important to follow the directions, written with green, at the spreadsheet. For instance when you write dates.
- It is important to use the "drop downs" when you have the opportunity.
- It is important not to use words as "nil". Use zero instead (0). Remember it's a machine who is reading your report and it can't "use its brain" to think logical.
- In "Security" at the phone number: remember no space between the numbers, and + before the country code.
- In "Waste", a waste type number must only appear one time, otherwise you get an error with a very long report, which is not easy to read. The note looks like this:

Ok

• You can also get an "save conflict" error. This error appears you you try to "submit" data which is not saved. There can be up to 3 lines

# In case, you need help: safeseanet@safeseanet.dk

Both Martin Ahl and Lise Højriis read this mail.

Remember to add your reference number in the mail if your question concerns a specific arrival/departure. Also screen-prints, which shows the problem.

Martin Ahl: +4572812062

Lise Højriis: +4572812066

If you need help outside normal, working hours and it CAN NOT wait:

MAS-vagten: +4572850370

Manuals and spreadsheets are available at: <a href="https://forsvaret.dk/safeseanet">https://forsvaret.dk/safeseanet</a>

Remember, that us at SSN, can NOT grant you dispensations of any kind, whether you can "drop" to report several information. We are only supporters of a system, in accordance with current Danish legislation. For dispensation, contact the competent Danish authority.
